

```
//python code for blinking led
```

```
//The following code will make the led blink untill the button pressed and once the button is pressed
```

```
//it stops blinking and continues to blink if the button is released
```

```
//importing the button and led interface from the gpio package
```

```
from gpiozero import Button,LED
```

```
led=LED(25)
```

```
while True:
```

```
    led.blink()
```

```
    button.wait_for_press()
```

```
    led.off()
```

```
    button.wait_for_release()
```
